Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Financial Domain
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	Input : the relative volume for the long out of the money options, indicates Response : that traders are pricing in a move lower. The RSI is also pointing to lower prices. In this case, the options market is pricing in a move lower of 10.6% during the life of the contract. That means that, currently, the 110 strike calls represent
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Input : the relative volume for the long out of the money options, indicates Response : [{"generated_text": " that the stock is trading in a tight range. \n\nThe relative volume for the long out of the money options, indicates that the stock is trading in a tight range. In\n\nThe relative volume for the long out of the money options, indicates that the stock is trading in a tight range. The relative volume"}]
